

BCN ARNI+K

post aesthetic treatments

BCN Arni+K is a specific, localized action cream for the improvement of epidermal alterations due to contusions, medical-aesthetic procedures, surgical interventions or cutaneous imperfections derived from cuperosis, rosacea, dilated capillaries or congestive complexion. Its formula with anti-irritant and soothing properties alleviate the affected areas. It contains arnica, vitamin K oxide, devil's claw (*harpagophytum procumbens*), chamomile essential oil, hyaluronic acid and vitamin C. BCN Arni+K delivers the following specific benefits:

- Alleviates congestion, relieves irritation and soothes the skin.
- Attenuates vascular redness and stains.
- It helps to recover skin homogeneity.
- It improves appearance, elasticity and coloration of skin areas affected by medical-aesthetic procedures.

BCN Arni+K is the indispensable cosmetic complement to your professional medical-aesthetic treatment. For optimal results, use it before and after treatment.
