

# BCN CLEANSER

## pH5 foam

BCN Cleanser is a foam cleanser that balances skin pH. Contains gentle, non-aggressive cleansers, It gently eliminates impurities accumulated on the skin and is well tolerated by skins that have become sensitive following dermatological treatments. It does not modify skin permeability and it is especially suitable before and after peeling treatments.

### Instructions for use

Push two or three pumps of BCN Cleanser over a cotton pad or gauze and apply the cleanser on the face, neck and décolleté. Remove with a cotton pad or clean gauze.

## Detailed information

### *Before treatment*

It is important to prepare the skin in a suitable way before treatment with chemical peels. One of the main routines of skin care is daily cleaning. The use of **BCN Cleanser** is especially recommended in the weeks prior to performing this type of cosmetic procedure. It **balances the skin pH** thanks to its formulation including lactic acid, respects the skin's **hydrolipidic barrier** and **does not modify the skin's permeability**.

### *After treatment*

After treatment with chemical peels, the skin remains sensitized for several days, making cleaning with a suitable soap such as **BCN Cleanser** more important than ever. Its use is essential to **accelerate recovery** and prevent excessive flaking, redness and dryness of the skin, as well as any bacterial infection. In addition, the foam texture of **BCN Cleanser** provides pleasant and delicate softness to the touch, precisely what the skin needs after an exfoliation treatment.
