

MESOAGE

hyaluronic treatment

Hyaluronic Acid, the principal ingredient of MesoAge®, is natural moisture-retaining filler that is critical to the structural integrity of the dermal collagen matrix. As we age, Hyaluronic Acid levels decrease dramatically, resulting in a loss of elasticity, deep wrinkles and dehydrated skin. MesoAge® offers you a Hyaluronic dermal infusion, to replenish the skin's water reserves, boost volume and restore a healthy, youthful glow.

MesoAge® delivers the following specific benefits:

- ✓ Forms a protective, non-occlusive film on the surface of the epidermis, preventing irritants from penetrating the skin.
- ✓ Inhibits transepidermal water loss.
- ✓ Plumps and tightens the skin, rejuvenating the facial appearance.
- ✓ Softens and smoothes wrinkles and rough skin.
- ✓ Calming properties, especially suited to allergy-prone skin.

For optimal results MesoAge® is the indispensable cosmetic complement to your professional mesotherapy treatment.
